

ABSTRACT OF THE DISCLOSURE

A gaming system and method based on a Blackjack card game using a dealer hold criteria and allowing a single player at a location to play blackjack against a plurality of dealers from a casino. The system and method includes the use of at least two dealer hand positions, a player hand position, wager placement positions corresponding with each dealer hand position. The player is credited for a wager placed in each wager position and then dealt a pair of cards to the player to create a player hand. A pair of cards to each of the dealers is also dealt, each of the dealers receiving one card face up. Cards are then dealt to the player at the request of the player to create a player hold hand. Cards are then dealt to each dealer based on the dealer hold criteria to create a dealer hold hand for each dealer. Then the system compares, based on the rules of Blackjack, the player hold hand to each dealer hold hand to determine if the player hold hand wins over any of the dealer hold hands. The single player is then credited for each dealer hold hand that is beat by the player hold hand and the casino is credited for each dealer hold hand that is not beat by a player hold hand, so that the single player carries out multiple games of blackjack based on the player hold hand.
